

Newster Quality Policy

Newster System's mission is to transform the hospital into an ecological island, in which the medical waste , solid liquids and laboratory wastewater produced, can be sterilized and sanitized with efficacy and safety according to the regulations in force and excellent standards , through the service provided by its products and training for a correct use of the same,.

Therefore the organization undertakes to periodically carry out a careful analysis of the national and international context, an in-depth assessment of the risks and opportunities connected to it, as required by the 9001: 2015 regulation in order to achieve the objectives set by the management and at the same time satisfy the needs of all stakeholders involved, through a continuous improvement of its system.

The strength of Newster is to design and produce patented and certified Made in Italy technology, making use of a twenty-year of know-how , with skills that are constantly trained and involved in sharing corporate strategies and a network of long-standing suppliers with a consolidated experience and reliability.

The ecological and innovative vocation of our mission is aimed at solving the problem of healthcare waste management on a global scale and our market is in strong and constant development.

Newster has therefore consolidated a network of loyal and technically trained distributors / customers directly at our headquarters in order to guarantee the end customer a service of absolute efficiency and reliability to use our technology in a lasting and problem-free way.
